TYLER COUNTY SPECIAL UTILITY DISTRICT

TCEQ-Designated as a SUPERIOR WATER SYSTEM

2019 ANNUAL WATER QUALITY REPORT

OUR DRINKING WATER IS REGULATED BY THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY. This Report is a summary of the quality of the water we provide to our customers. The analysis was made by using the data from the most recent required tests, in conjunction with the Federal (EPA) Drinking Water Standards, and is presented in the following pages. We hope this information helps you to become more knowledgeable about what's in your drinking water. [En Espanol: Este reporte incluye informacion importante sobre el aqua para tomar. Si tiene preguntas o' discusiones sobre este reporte en espanol, favor de llamar al tel. (409) 429-3994 par hablar con una persona bilingue en espanol.] NOTE: The pages that follow (pages 3 – 4) lists all the federally regulated or monitored contaminants found in your drinking water.

All drinking water may contain contaminants. When drinking water meets federal standards there may not be any health-based benefits to purchasing bottled water or point of use devices. Drinking water, including bottled water, may reasonably be expected to contain at least some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (1-800-426-4791).

Secondary Constituents: Many constituents (such as calcium, sodium, iron, or manganese) which are often found in drinking water, can cause taste, color, and odor problems; these are called Secondary Constituents and are regulated by the State of Texas, not EPA. These constituents are not a cause for health concerns and are not required to be a part of this report, but they may greatly affect the appearance and taste of your water. NOTE: Groundwater sources in Tyler County contain Iron (Fe) and Manganese (Mn), which are aesthetic issues — not health issues — and these constituents often cause discolored water. The Tyler County SUD has successfully completed the Rehabilitation of the Groundwater Filters at the Rockland Well, and these Filters are significantly reducing the levels of Iron and Manganese before the water enters the Rockland water distribution system.

Special Notice for the Elderly, Infants, Cancer Patients, People with HIV/AIDS, or other Immune Problems: Some people (as these listed or with similar health problems) may be more vulnerable to contaminants in drinking water than the general population. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Water Sources: The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals, and in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water before treatment include: microbes, inorganic contaminants, pesticides, herbicides, radioactive contaminants, and organic chemical contaminants.

Definitions and Water Quality Information: The following definitions pertain to the terms and abbreviations listed on the 2019 WATER QUALITY REPORT displayed on the following pages. Telephone numbers for obtaining additional water quality information include: TCEQ (512-239-1000) and the Tyler County SUD (409-429-3994).

- Maximum Contaminant Level (MCL) = The highest permissible level of a contaminant (constituents) in drinking water. MCLs are set as close to MCLGs as feasible using the best available treatment technology.
- Maximum Contaminant Level Goal (MCLG) = The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.
- Maximum Residual Disinfectant Level (MRDL): The highest level of disinfectant allowed in drinking water. There is convincing evidence that disinfection is necessary for control of microbial contaminants.
- Maximum Residual Disinfectant Level Goal (MRDLG): The level of disinfectant (chlorine) below
 which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of
 disinfectants to control microbial contamination.

- Treatment Technique (TT) = A required process intended to reduce the level of a water contaminant.
- Action Level (AL) = The concentration of a contaminant, which if exceeded triggers treatment or other requirements which a water system must follow.
- VOCs = Volatile Organic Chemicals
- <u>Measurement Definitions:</u> pCi/l or mrem/year (picocuries per liter or millirems per year measures of radioactivity); ppm (parts per million, or milligrams per liter mg/l); ppb (parts per billion, or micrograms per liter), NTU (Nephelometric Turbidity Units a measure of the degree of turbidity), ppt (parts per trillion or nanograms per liter), and ppq (parts per quadrillion or picograms per liter).

OTHER DEFINITIONS:

- Level 1 Assessment: A study of the water system to identify potential problems if Coliform Bacteria have been found in the water system (not found in TCSUD system).
- Level 2 Assessment: A detailed study to identify potential problems if Fecal Coliforms (E. Coli) have been found in the water system (not found in TCSUD system).

PUBLIC PARTICIPATION: The Tyler County SUD Board of Directors normally holds a Regular Monthly Board Meeting on the Third Tuesday of each Month (9:00 a.m.) at the TCSUD Office. Additionally, the TCSUD General Manager and Office Staff may be contacted via telephone # 409-429-3994, if you have any comments or questions in regard to this Water Quality Report or other issues associated with the Tyler County Special Utility District. NOTE: The TCSUD Office is open extended hours on Monday — Thursday (7:00 a.m. to 5:30 p.m.); Emergency Calls can be made to the TCSUD Answering Service (# 409-429-3994) when the Office is closed (after-hours and on Friday, Saturday, and Sunday). An outside Drop-Box is also available for receiving payments.

In 2015, based on the outstanding performance of the Tyler County Special Utility District, the TCEQ designated it as a SUPERIOR PUBLIC WATER SYSTEM.

Where Do We Get Our Drinking Water? Our drinking water is obtained from GROUNDWATER water sources and is pumped from the following Aquifer: GULF COAST. A Source Water Susceptibility Assessment for your drinking water source(s) is currently being updated by the Texas Commission on Environmental Quality. The report will describe the susceptibility and types of constituents that may come into contact with your drinking water source based on human activities and natural conditions. The information contained in the assessment will allow us to focus on source water protection strategies. For more information on source water assessments and protection efforts at our system, please contact us at # 409-429-3994; other details about sources and source-water assessments are available in Drinking Water Watch (TCEQ) at the following: http://dww.tceq.texas.gov/DWW...

THE CUSTOMER COMES FIRST: It is the GOAL of the TCSUD Board and Directors and Employees to make sure that that the Customer Comes First when he or she is being served by the Tyler County Special Utility District. This means that we are working hard to cut costs, to make certain that we are listening to Customer Concerns and that our response to these concerns is quick and complete, that we are being flexible (within the boundaries of TCSUD Policies) in dealing with Customer issues, that we respect our Customers and realize their value, and that we are making organizational improvements for the benefit of our Customers. If you have any issues with the TCSUD, questions about the TCSUD organization, or have suggestions for ways that we can improve, please contact the TCSUD General Manager at # 409-429-3994. Thank you.

2019 ANNUAL WATER QUALITY REPORT – Tyler County Special Utility District

2019 Water Quality Test Results

Lead and Copper (no violations for TCSUD)

Copper and 0.015 ppm for Lead); the Highest Copper Level was 0.29 ppm and the Highest Lead Level was 0.0019 ppm. The major contributor of Lead and Copper to a water supply is Corrosion of Lead and Copper Plumbing within the Customer's Plumbing System. Additional information from the TCEQ is listed The TCSUD was required to take twenty (20) Lead and Copper Samples in 2019. All samples were below the ACTION LEVEL Regulatory Limits (1.3 ppm for below:

plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Violation Likely Source of Contamination	By-product of drinking water disinfection.
Violation	Z
Units	qđđ
MCL	: 09
MCLG	No goal for the total
Highest-Level Range of Individual Detected Samples	4.3 - 4.3
Highest-Level Detected	4
Collection Date	2019
Disinfection By-Products	Haloacetic Acids (HAA5)

^{*} The value in the Highest Level or Average Detected column is the highest average of all HAAS sample results collected at a location over a year'
